

Access Control System

Access Control Systems

Wireless access control systems are taking the world by storm, making it possible to install systems in existing buildings at a fraction of the cost of traditional wired systems.

FLEXIBILITY – RELIABILITY – OPERATIONAL COST REDUCTION – MULTI-PLATFORM – WAY OF THE FUTURE

If you are looking for protection from uncontrolled access, Security First Locksmiths can deliver the perfect solution, tailored to your exact requirements to provide you with all the security, convenience and control you need.

Our state-of-the-art electronic locking systems offer flexible and functional access control with a wide choice of software options. Our access control systems are designed to work in a wire free environment so there is no need to hard wire the building, allowing you to keep your original doors and locks in place. This makes installation fast, self-contained and straightforward.

Both key cards and locks can be programmed to allow or restrict access to different parts of the building. And the information stored in the key card can be transferred to a computer to provide precise audit trail information about where and when each lock has been used including the date, time and whether access was allowed or denied.

Benefits

Stop Replacing locks – With electronic access there's no need to replace a lock if the keys are lost or stolen. Simply block the user, secure your business and forget about unwanted intrusions.

Unlimited Access – Heavy keychains are now a thing of the past, with all your access at a click of a button.

Total Control – Individually define who can enter what doors during what times.

Open Doors Remotely – Total control whenever and where ever.
